- Earthing and bonding
- Testing & Commissioning
- As fitted & O&Ms

This contract involved completing the above works to a new extension to an existing care home in Glenfield.

All lighting design works for the entire building were carried out in house, once on site work was carefully coordinated and scheduled around an operating care home. Health and Safety was cautiously monitored by our Health and Safety advisor to ensure the project was completed in a safe manner.

Electricians worked unsociable hours to accommodate the needs of the care home and the main contractor when necessary and to ensure that the contract was completed successfully and on time.
